

Punjab Technical University

1. NAME OF DEPTT./CENTER: **Computer Science Engineering**
2. subject code: **BTCS 301 Course Title: Computer Architecture**
3. Contact Hours **L:3 T:2 P:1**
4. Examination Duration(Hrs): **Theory**3 **Practical**1
5. credits: 2
6. semester **3**
7. **Objectives : This subject gave the knowledge about computer components.**
 - **Register Transfer and Microoperations** Register transfer language & operations, arithmetic microoperations, logic microoperations, shift microoperations, arithmetic logic shift unit. Design of a complete basic computer and its working. [5]
 - **Basic Computer Organisation and Design** Instruction codes, Computer registers, Computer Instructions, Timing and control, Instruction Cycle, Memory reference instructions, Input Output and Interrupt, Design of basic Computer, Design of Accumulator Logic. [6]
 - **Design of Control Unit** Control memory, design of control unit microprogrammed, hardwired, and their comparative study. [3]
 - **Central Processing Unit** General Register Organisation, Stack Organisation, Instruction formats, Addressing Modes, Data transfer and manipulations, Program control, RISC and CISC architecture. [6]
 - **Input-Output Organisation** Peripheral devices, IO Interface, asynchronous data transfer, modes of transfer, priority interrupt, DMA, IO processor, serial communication. [5]
 - **Memory Organisation** Memory hierarchy, main memory, auxiliary memory, associative memory, cache memory, virtual memory, memory management hardware. [6]
 - **Advanced concepts of Computer Architecture** Concept of pipeline, Arithmetic pipeline, Instruction , vector processors and array processors. Introduction to parallel processing, Interprocessor communication & synchronization. [5]
 - **Sets, relations and functions** Introduction, Combination of Sets, ordered pairs, proofs of general identities of sets, relations, operations on relations, properties of relations and functions, Hashing Functions, equivalence relations, compatibility relations, partial order relations. [7]
 - **Combinatorial Mathematics** Basic counting principles Permutations and combinations Inclusion and Exclusion Principle Recurrence relations, Generating Function, Application. [7]
 - **Monoids and Groups** Groups Semigroups and monoids Cyclic semigroups and submonoids, Subgroups and Cosets. Congruence relations on semigroups. Morphisms. Normal subgroups. Dihedral groups. [7]
 - **Graph Theory** Graph- Directed and undirected, Eulerian chains and cycles, Hamiltonian chains and cycles Trees, Chromatic number Connectivity, Graph coloring, Plane and connected graphs, Isomorphism and Homomorphism. Applications. [3]
 - **Boolean Algebra** Boolean postulates and laws De-Morgans Theorem, Principle of Duality, Boolean expression Boolean function, Minimization of Boolean expressions Sum of Products (SOP), Product of Sums (POS), Minterm, Maxterm, Canonical forms, Conversion between canonical forms, Karnaugh map Minimization, Quine-McCluskey method - Dont care conditions. [5]

- **Signal Conversions** Analog & Digital signals. A,D and D,A conversion techniques (Weighted type, R-2R Ladder type, Counter Type, Dual Slope type, Successive Approximation type). [5]
- **Stacks** Sequential and linked representations, operations on stacks, application of stacks such as parenthesis checker, evaluation of postfix expressions, conversion from infix to postfix representation, implementing recursive functions. [4]

Suggested Readings/ Books

- M. Moris Mano, **Computer System Architecture**, P. Pal Choudhri.
- William Stallings, **Computer Organisation and Architecture**, P. Pal Choudhri.
- David A Patterson, **Computer Architecture**, P. Pal Choudhri.
- P. Pal Choudhri, **Computer Organisation and Design**, P. Pal Choudhri.
- Kai Hawang, **Advanced Computer Architecture**, A & C BLACK.

1. NAME OF DEPTT./CENTER: **Computer Science Engineering**
2. subject code: **BTCS302** Course Title: **Discrete Structures**
3. Contact Hours **L:3 T:2 P:1**
4. Examination Duration(Hrs): **Theory** 3 **Practical** 1
5. credits: 2
6. semester **3**
7. **Objectives :** The objective of this course is to provide the necessary back ground of discrete structures with particular reference to the relationships between discrete structures and their data structure counterparts including algorithm development.
 - Rings and Boolean algebra Rings, Subrings, morphism of rings ideals and quotient rings. Euclidean domains Integral domains and fields Boolean Algebra direct product morphisms Boolean sub-algebra Boolean Rings Application of Boolean algebra (Logic Implications, Logic Gates, Karnaugh-map) [8]

Suggested Readings/ Books

- Lipschutz, **Discrete Mathematics (Schaum series)**, fknkfnks.

1. NAME OF DEPTT./CENTER: **Computer Science Engineering**
2. subject code: **BTCS303 Course Title: Digital Circuits & Logic Design**
3. Contact Hours **L:3 T:2 P:1**
4. Examination Duration(Hrs): **Theory** 3 **Practical** 1
5. credits: 2
6. semester **3**
7. **Objectives :** Demonstrate the operation of simple digital gates, identify the symbols, develop the truth table for those gates; combine simple gates into more complex circuits; change binary, hexadecimal, octal numbers to their decimal equivalent and vice versa, demonstrate the operation of a flip-flop. Design counters and clear the concept of shift registers. Study different types of memories and their applications. Convert digital into analog and vice versa.
 - **Number Systems** Binary, Octal, Decimal, Hexadecimal. Number base conversions, 1s, 2s, rth complements, signed Binary numbers. Binary Arithmetic, Binary codes: Weighted BCD, Gray code, Excess 3 code, ASCII conversion from one code to another. [5]
 - **Logic GATES** AND, OR, NOT, NAND, NOR, Exclusive-OR and Exclusive-NOR. Implementations of Logic Functions using gates, NAND-NOR implementations. Study of logic families like RTL, DTL, DCTL, TTL, MOS, CMOS, ECL and their characteristics. [5]
 - **Combinational Circuits** Design procedure Adders, Subtractors, Serial adder, Subtractor, Parallel adder, Subtractor Carry look ahead adder, BCD adder, Magnitude Comparator, Multiplexer, Demultiplexer, encoder, decoder, parity checker, code converters. Implementation of combinational logic using MUX. [6]
 - **Sequential Circuits** Flip flops SR, JK, T, D and Master slave, Excitation table, Edge triggering, Level Triggering, Realization of one flip flop using other flip flops. Asynchronous, Ripple counters, Synchronous counters, Modulo-n counter, Ring Counters. Classification of sequential circuits-Moore and Mealy, Design of Synchronous counters: state diagram, Circuit implementation. Shift registers. [4]
 - **Memory Devices** Classification of memories, RAM organization, Write operation, Read operation, Memory cycle. Static RAM Cell-Bipolar, RAM cell, MOSFET RAM cell, Dynamic RAM cell. ROM organization, PROM, EPROM, EEPROM, Field Programmable Gate Arrays (FPGA). [4]

Suggested Readings/ Books

Pariticals

Digital Circuits & Logic Design

- Study of Logic Gates: Truth-table verification of OR, AND, NOT, XOR, NAND and NOR gates; Realization of OR, AND, NOT and XOR functions using universal gates.
- Half Adder / Full Adder: Realization using basic and XOR gates.
- Half Subtractor / Full Subtractor: Realization using NAND gates.
- 4-Bit Binary-to-Gray & Gray-to-Binary Code Converter: Realization using XOR gates.
- 4-Bit and 8-Bit Comparator: Implementation using IC7485 magnitude comparator chips.
- Multiplexer: Truth-table verification and realization of Half adder and Full adder using IC74153 chip.
- Demultiplexer: Truth-table verification and realization of Half subtractor and Full subtractor using IC74139 chip.
- Flip Flops: Truth-table verification of JK Master Slave FF, T-type and D-type FF using IC7476 chip.
- Asynchronous Counter: Realization of 4-bit up counter and Mod-N counter using IC7490 & IC7493 chip.
- Synchronous Counter: Realization of 4-bit up/down counter and Mod-N counter using IC74192 & IC74193 chip.
- Shift Register: Study of shift right, SIPO, SISO, PIPO, PISO & Shift left operations using IC7495 chip.
- DAC Operation: Study of 8-bit DAC (IC 08/0800 chip), obtain staircase waveform using IC7493 chip.
- ADC Operations: Study of 8-bit ADC.

- 7. Objectives :** nnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnnn

- ### Suggested Readings/ Books

- 6

Pariticals

Data Structures

- Write a menu driven program that implements following operations (using separate functions) on a linear array:
- Write a menu driven program that maintains a linear linked list whose elements are stored in on ascending order and implements the following operations (using separate functions)
- Write a program to demonstrate the use of stack (implemented using linear array) in converting arithmetic expression from infix notation to postfix notation.
- Program to demonstrate the use of stack (implemented using linear linked lists) in evaluating arithmetic expression in postfix notation.
- Program to demonstration the implementation of various operations on a linear queue represented using a linear array.
- Program to demonstration the implementation of various operations on a circular queue represented
- Program to demonstration the implementation of various operations on a queue represented using a linear linked list (linked queue).
- Program to illustrate the implementation of different operations on a binary search tree.
- Program to illustrate the traversal of graph using breadth-first search.
- Program to illustrate the traversal of graph using depth-first search.
- Program to sort an array of integers in ascending order using bubble sort.
- Program to sort an array of integers in ascending order using selection sort.
- Program to sort an array of integers in ascending order using insertion sort.
- Program to sort an array of integers in ascending order using radix sort.
- Program to sort an array of integers in ascending order using merge sort.
- Program to sort an array of integers in ascending order using quick sort.
- Program to sort an array of integers in ascending order using heap sort.
- Program to sort an array of integers in ascending order using shell sort.
- Program to demonstrate the use of linear search to search a given element in an array.
- Program to demonstrate the use of binary search to search a given element in a sorted array in ascending order.

Pariticals

Object Oriented Programming Using C++

- Write a program that uses a class where the member functions are defined inside a class
- Write a program that uses a class where the member functions are defined outside a class.
- Write a program to demonstrate the use of static data members.
- Write a program to demonstrate the use of const data members
- Write a program to demonstrate the use of zero argument and parameterized constructors.
- Write a program to demonstrate the use of dynamic constructor.
- Write a program to demonstrate the use of explicit constructor.
- Write a program to demonstrate the use of initializer list.
- Write a program to demonstrate the overloading of increment and decrement operators.
- Write a program to demonstrate the overloading of binary arithmetic operators.
- Write a program to demonstrate the overloading of memory management operators.
- Write a program to demonstrate the typecasting of basic type to class type.
- Write a program to demonstrate the typecasting of class type to basic type.
- Write a program to demonstrate the multilevel inheritance.
